Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from Aeronautical Motor: Instruction Paper Early Types. In the general acclaim that has greeted man's final conquest of the air, the chief contributing factor that has made it possible has to a great extent been overlooked. Power in sufficiently concentrated form appears to have been the only thing lacking for at least half a century past to have made possible for two or three generations what has been the reality of less than a decade. Not that a perfected light-weight power unit was sufficient in itself, as there are numerous principles governing flight that have been discovered only in recent years, but it was the one thing needed to lift a heavier-than-air machine from the ground and to keep it in the air. With its aid, it appears to be more than probable that the problem of the sustaining plane and the difficulties of equilibrium would have found a solution at a much earlier date. That at least one far-sighted investigator had realized the possibilities of the monoplane is shown by Henson's machine of 1843. Henson's steam engine was justly considered a marvel for its anticipated numerous features that are generally considered as the development of but very recent years in this form of prime mover. But despite the great improvements it embodied and the fact that it could be operated continuously on but 20 gallons of water, its output was but 20 horse-power for a total weight of 600 pounds. Compare this low limit of 30 pounds per horse-power, of sixty years ago, with the 1.75 pounds per horse-power of the 140-horse-power Gnome motor and the advance that has been achieved will...
